

Join Jane Street for an All Majors Estimathon® at Harvard!

Tuesday, November 7th @ 6:00pm
SOCH Event Hall

At this event, we're particularly excited to meet students studying biology, chemistry, physics, linguistics, statistics, economics, and other sciences and liberal arts who may be unfamiliar with Jane Street and what we do.

As a quantitative trading firm, we value problem-solving, quantitative reasoning, and creative collaboration. While our industry traditionally attracts people from backgrounds like math, computer science, and finance, we know that these skills are developed across all different fields within science and the liberal arts. This event is an opportunity for these students to learn more about us.

The [Estimathon®](#) is a mind bending mixture of logic and trivia. In teams, you'll attempt 13 Fermi problems in 30 minutes. Be prepared to come up with the best set of confidence intervals! Sample problems include:

How many breaths does the average U.S adult take in a lifetime?

What is the mass of the earth in tons?

How many paper bags are made from 14 million trees?

[Please sign up here](#) if you're interested in attending! We will confirm all attendees by end of day on Monday, November 6th. Food and swag will be provided!

Jane Street is a quantitative trading firm with offices worldwide. We hire smart, humble people who love to solve problems, build systems, and test theories. You'll learn something new every day in our office—whether it's connecting with a colleague to share perspectives, or participating in a talk, class, or game night. Our success is driven by our people and we never stop improving.

Want to learn more about us? Check out the Latest and our Get to Know Us video series. We thought about our frequently asked questions and asked some of our former interns and streeters to answer them for you. If you were looking for some tech talk subject matter, check out our [tech blog](#) and [Signals and Threads](#), our new podcast.
